

## REACH Declaration

The company VacuTec Meßtechnik GmbH is a manufacturer of ionizing radiation detectors for medical applications, measurements in industry, environmental monitoring and analyses. In the sense of REACH we are a so-called „downstream user“ and distribute solely articles. Under normal and reasonably foreseeable circumstances of application our products do not release any substances. Therefore VacuTec Meßtechnik GmbH is neither under obligation for registration nor for the compilation of any material safety datasheets (MSDS).

We constantly observe the REACH requirements, especially the ongoing admission of substances in the Candidate List of Substances of Very High Concern (REACH-Annex XIV).

For some parts used in our products, SVHC substances have been identified in weight proportion above 0.1 %. Up-to-date lists of affected products including article numbers, specification of parts, names of SVHC and their CAS can be found on the Internet page [www.vacutec-gmbh.de/en/about-vacutec/quality-management](http://www.vacutec-gmbh.de/en/about-vacutec/quality-management)

No exposure is expected, because SVHC substances are firmly bound either in an alloy or in **an adhesive**. Therefore no additional information is required for safe use. Furthermore, we would like to point out that the use of the affected components is indispensable for the functionality of our products, e.g. as radiation shielding.

Specifications about the ingredients are based on information from our suppliers which are also obliged to inform us without being asked and without delay, if products they deliver to us contain an SVHC substance above 0.1% by mass.

This information is based on our current state of knowledge and experience. In case of changes we will inform you immediately and actively.

If there are any questions please contact: [compliance@vacutec-gmbh.de](mailto:compliance@vacutec-gmbh.de)

Dresden, February 2022

Dr. Bernd Wörmann
